Profile of studies by WHO region

The evidence base covers 187 countries and territories. Of these, 183 have matching national GBD 2023 disease-burden data; Cayman Islands, Guadeloupe, French Guiana, Hong Kong have no separate row in this export, so burden comparisons exclude them. Panel B's regional rates use the 154 countries in the regional country-data file with available burden data, including countries with no evaluation. Panel A uses full study geography and does not require burden data.

Maternal & newborn health	7%
Viral hepatitis	6%
Diabetes	5%

51% report QALYs or DALYs

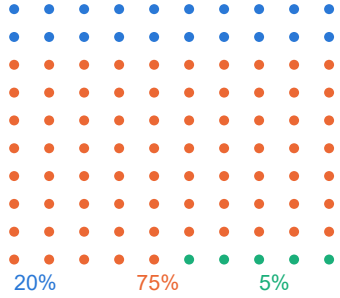

WPR

Western Pacific Region

n = 6,492

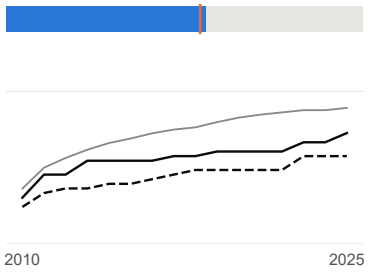

0.99 per 100,000 DALYs

Top three diseases

Lung cancer	5%
Viral hepatitis	3%
Breast cancer	3%

56% report QALYs or DALYs

Full economic evaluations only; studies naming multiple regions contribute to each. Disease dots show fractional shares across three GBD classes among disease-coded evaluations; one dot is about 1%. Utility bar: QALY or DALY reporting; orange marker: all linked evaluations. Trends: cumulative share of countries with ≥1 evaluation (solid), ≥2 (dashed), all regions ≥1 (grey); 2026 excluded as incomplete.
