Research share relative to pooled disease burden

Research: eligible 2010–2026 publications (2026 incomplete), naming a level-2 cause and classified setting. Burden: GBD 2023 DALYs summed over 2010–2023. Research uses publication-year income; burden uses burden-year income. Multi-cause and multi-setting studies can contribute more than once. Groups follow GBD level 1; rows follow global pooled burden. The 1× reference indicates equal shares, not an adequacy target. See source data for denominators and provenance.
