What kind of evidence is it, and how fast is it growing?

A Publication type (n = 41,610)

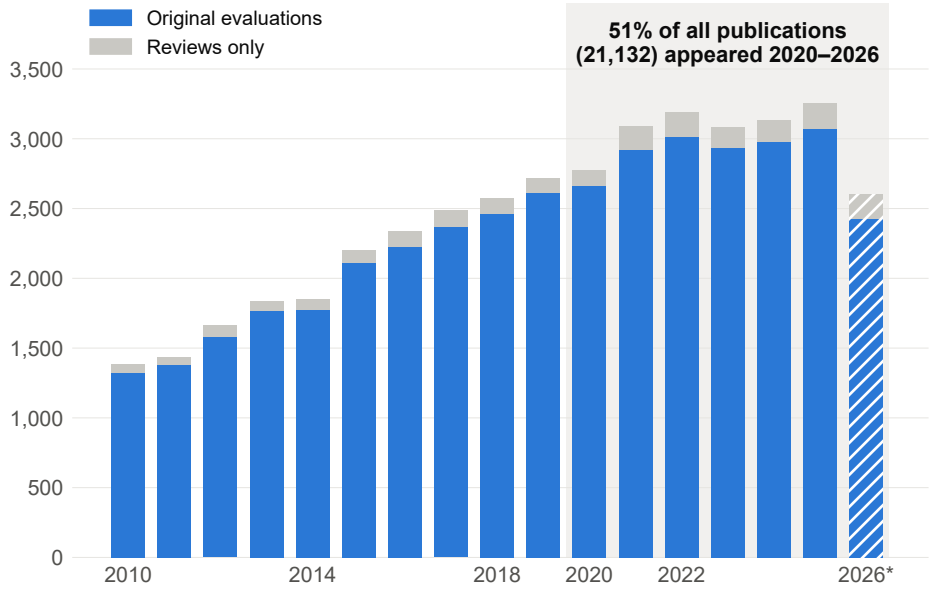

Original full economic evaluations: 39,625 (95.2%)

B Evaluation type, original evaluations (n = 39,625)

C Publications per year, 2010–2026

Eligible publications, 2010–2026. Original full economic evaluations compare both costs and consequences; 667 of them also report a review (for example, a systematic review followed by the authors' own evaluation). Reviews only synthesise published evaluations and report no evaluation of their own. Panel B: each original evaluation has one primary type. Panel C: shading marks 2020 onwards; *2026 is incomplete (searches ran to August 2026), so its bar is hatched.
