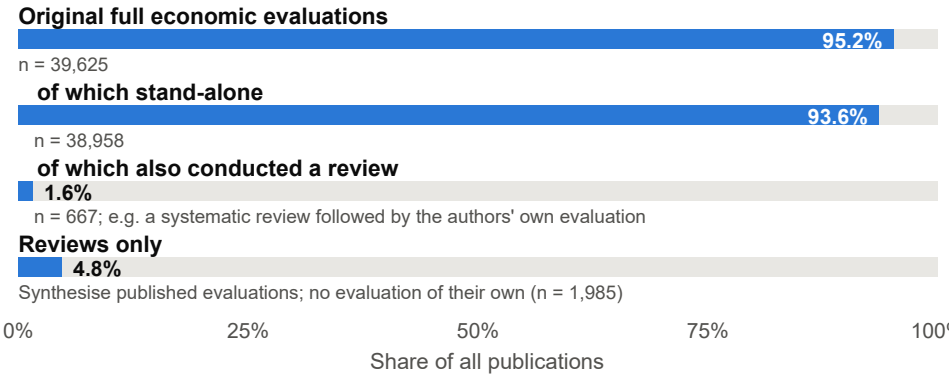
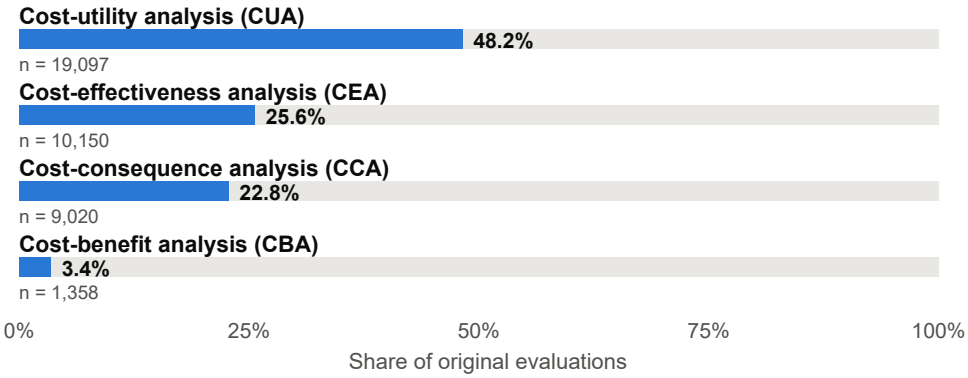
Types of health economic evidence and their growth, 2010–2026

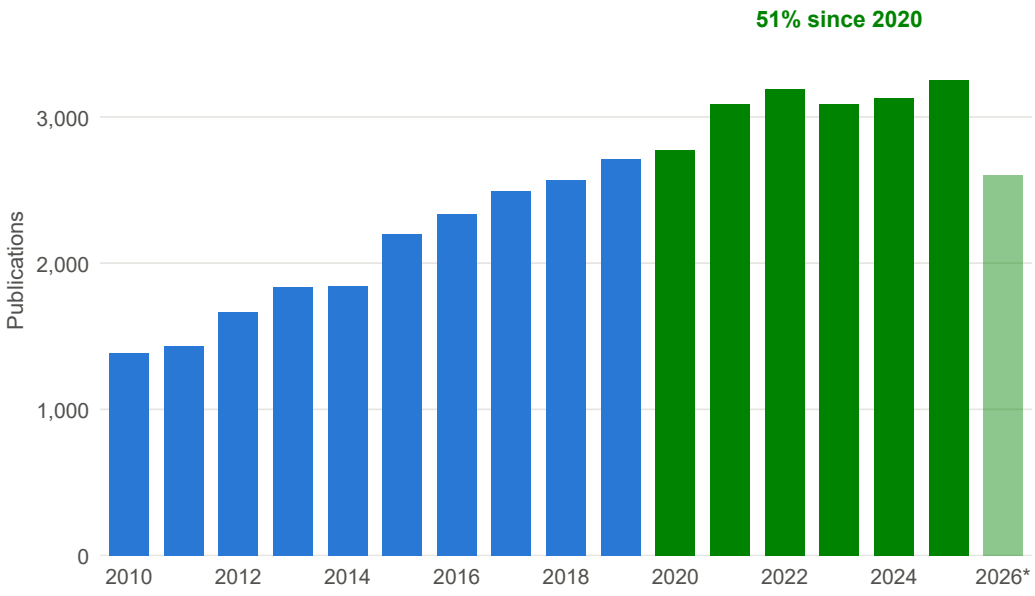
A Publication type (n = 41,610)



B Evaluation type (original evaluations, n = 39,625)



C Publications per year, 2010–2026



D Growth of the evidence

51%

of all publications (21,132 of 41,610) appeared in 2020–2026

2.4 times

as many publications in 2025 as in 2010 (3,255 vs 1,383)

Eligible publications, 2010–2026. Original full economic evaluations compare both costs and consequences; 667 also report a review (for example, a systematic review followed by the authors' own evaluation). Each original evaluation has one primary type. C: green marks 2020 onwards; *2026 is incomplete (searches ran to August 2026), so its bar is faded and D compares 2025 with 2010.
